## 1. New Features in Minitab Model Ops 1.4.2

The following features are now available with Minitab Model Ops 1.4.2.

- Relative variable importance of predictor variables displays on the drift report to help you easily identify the predictors that are most critical to the model fit.
- Model repository enhancements including the ability to view model information, model schema, and model creator, as well as the ability to easily rename a model.
- Improved drift report navigation to quickly access the production period of interest.

## 2. Problems Resolved in Minitab Model Ops 1.4.2

The following issues are resolved in Minitab Model Ops 1.4.2.

- Report validations were inconsistent with backdated data. (263402)
- Overall drift severity now sorts logically in descending order vs. alphabetical. (249819)
- Tooltips were only enabled if the cell contains ellipses. Fix to display all tooltips consistently. (249718)
- Reduced instances of unknown statuses in the Model Repository. (256460)
- White screen occurs when navigating to the blank drift page. Fix to display "reports not available" message. (260461)
- The arrow that indicates sort order for the predictor variable column was incorrect. (264515)
- SOD and EOD errors in Drift Report. (266336)
- Viewer role cannot download baseline data from Model Repository. (265394)
- Stability alert when promotion matches SOD/UTC. (258872)
- Incomplete Stability Report for GZLM and REGR challenger models after demotion from champion model. (254611)
